

# CV Source 8x

Version 2019-12-12, edit 2019-12-14

The module contains eight cv sources.

When this button is toggled on, knob values will be quantized to 1/12 volt (half tone) steps

These radio buttons set maximum knob voltage

This button lets you scale offset amount

Voltage at this input jack determines offset for knob values, that is usable for key tracking

CV tuning, max value depends on selected range

CV output voltage = knobvalue + (offset \* amount)

Example preset:

[PM Sequencer 5.voltagepreset](#)
