

# LEDder

Version 2021-12-11

LEDder is a utility that let you watch several signals in complex modular setups.

(cv in)                      any CV voltage;

[LED]                        red light, if input voltage is greater than zero,  
blue light, if input voltage is lower than zero;

(cv thru)                    repeats voltage from cv input,  
sends 0 volts, when cv input is unplugged;
