

# PM Slope Amp - fader

Edit 2022-03-09

This is a basic **Slope Amp** application. A CV controls fade in / fade out.

## Slope Amp setups:

single cv mode	on
link mode	off
up slopes	fade in time
down	fade out time
max %	100
min %	0 (see explanation)

Any control voltage can be used. In this example a toggle button provides CV.

For a regular fade out **min %** is set to 0.

For another application you might want to reduce audio level for a while. Therefore you can set **max %** for high level and **min %** for low level. In this case **up CV in** would serve as “accent” control.
